

Bio – Hyalur range

Sodium Hyaluronate Ophthalmic Solution

Bio-Hyalur and Bio Hyalur Plus are sterile viscoelastic preparations of highly purified Sodium Hyaluronate.

Intended for use during anterior segment surgery of the human eye during:

- Cataract extraction.
- Intraocular Lens (IOL) implantation.
- Corneal transplantation.
- Glaucoma surgery.

Product features:

- Creates and maintains anterior chamber depth and visibility.
- Protects corneal endothelial cells, other intraocular tissues.
- Minimises interaction between tissues during surgical manipulation.
- Aids visualisation during surgery.
- Easy to inject and remove from the anterior segment.

Specifications:

- Bio-Hyalur
(Sodium Hyaluronate 1.0% W/V) - 1.0ml.
- Bio-Hyalur Plus
(Sodium Hyaluronate 1.4% W/V) - 1.0ml.
- Ready to use in pre-loaded BD glass syringes and 27G cannula.
- Medical grade blister packaging.
- Ambient storage - no refrigeration required.
- Latex-free.
