

Eye Visc PFS™

Hydroxypropyl Methylcellulose (HPMC) Ophthalmic Solution

Eye Visc PFS™ HPMC 2.0% is a clear dispersive viscoelastic for protection and lubrication of delicate cells or tissues. Used as a surgical aid in a range of ophthalmic procedures.

Product features:

- Easy to use.
- Helps maintain a deep, stable anterior chamber allowing easy and safe implantation of IOLs.
- Protects tissue during procedures.
- Highly retentive, dispersive viscoelastic.
- Possesses a high dynamic viscoelasticity and coating ability.
- Enhances visualisation of the top of the cornea.

Product indications:

Lubricates and protects delicate cells and tissue during ophthalmic procedures including:

- Anterior Segment surgery.
- Cataract surgery.
- Intraocular lens implantation.
- Corneal transplantation.
- Glaucoma surgery.

Specifications:

- Eye Visc PFS™ 2ml 2.0% w/v.
- Single use sterile viscoelastic solution.
- Pre-filled BD glass syringe with 23G CE marked cannula.
- Ambient storage - no refrigeration necessary.
- Non pyrogenic and latex free.

Product code: HPMC2B (box of 10)
